- GoodFirms rating (5 stars), Recommendation rate (100%)

We have completed **5000+** Projects & **2000+** clients all over the world.

Table of Contents

1 Introduction

1.1 Background

The objective of this project is to develop a general purpose for an e-commerce store where home appliances can be bought from the comfort of home through the Internet.

E-commerce is fast gaining ground as an accepted and used business paradigm. More and more business houses are implementing websites providing functionality for performing commercial transactions over the web. It is reasonable to say that the process of shopping on the web is becoming commonplace.

An online store is a virtual store on the Internet where customers can browse the catalog and select products of interest. The selected items may be collected in a shopping cart. At checkout time, the items in the shopping cart will be presented as an order. At that time, more information will be needed to complete the transaction. Usually, the customer will be asked to fill or select a billing address, a shipping address, a shipping option, and payment information such as credit card number for any product such as books, CDs, computers, mobile phones, electronic items, etc.

1.2 Design Goals

An E-commerce website is supposed to be designed as an online ordering system and provide convenience for users, where customers can browse different categories of shopping. If the user has a particular preference and wants to search for a particular item, the customer can search for it and can add it to their shopping cart. The core of the system is for customers, they can view order detailed information.

2. Scope & Objectives

2.1 Scope

E-commerce sites have their products organized in categories which in turn can be used as search scopes. This allows users to limit the boundaries of their search to a specific category. It leads to more effective performance i.e. better quality, greater customer satisfaction, and better corporate decision-making. On an e-commerce website, customers can click through intuitive navigation or use a search box to immediately narrow down their product search. Some websites remember customer preferences and shopping lists to facilitate repeat purchases. E-commerce allows them to visit the same store virtually, with a few mouse clicks.

KEY FEATURES:

- User Management

- Products Management

- Cart Management

- Payment Gateway Integration

- Support Page

- Admin Panel

- Add a new product

- Manage Product availability

- Offer/Deals management

- View order detailed information

2.2 Primary Focus
