1. Introduction

1.1 Background

ERP provides an integrated and continuously updated view of core business processes using common databases maintained by a database management system. ERP systems track business resources—cash, raw materials, production capacity—and the status of business commitments: orders, purchase order, and payroll. The applications that make up the system share data across various departments (manufacturing, purchasing, sales, accounting, etc.) that provide the data.

This module allows user to do following actions:-

- An integrated system.
- Operates in (or near) real time.
- A common database that supports all the applications.
- A consistent look and feel across modules.

Our Portfolio: https://toxsl.com/portfolio/

1.2 Design Goals

The module should be designed in such a way, that users will find it easy and intuitive to use. The module should be easy to navigate and understand. An efficient design is especially important, because if users are unable to use the module, then a major project goal may be left unfulfilled, namely to providean effective platform to support collaboration amongst group members.

2. Scope & Objectives

2.1 Scope

The objective of developing such a computerization system is to reduce paper work and safe of time in management.

KEY FEATURES:

- Improve Service Experience
- Enhance Competitiveness
- Modernize Business Processes and Systems
- Automate Business Solutions
- Increase Operating Efficiency
- Provide Access to Standardized College Data.

2.2 Objectives

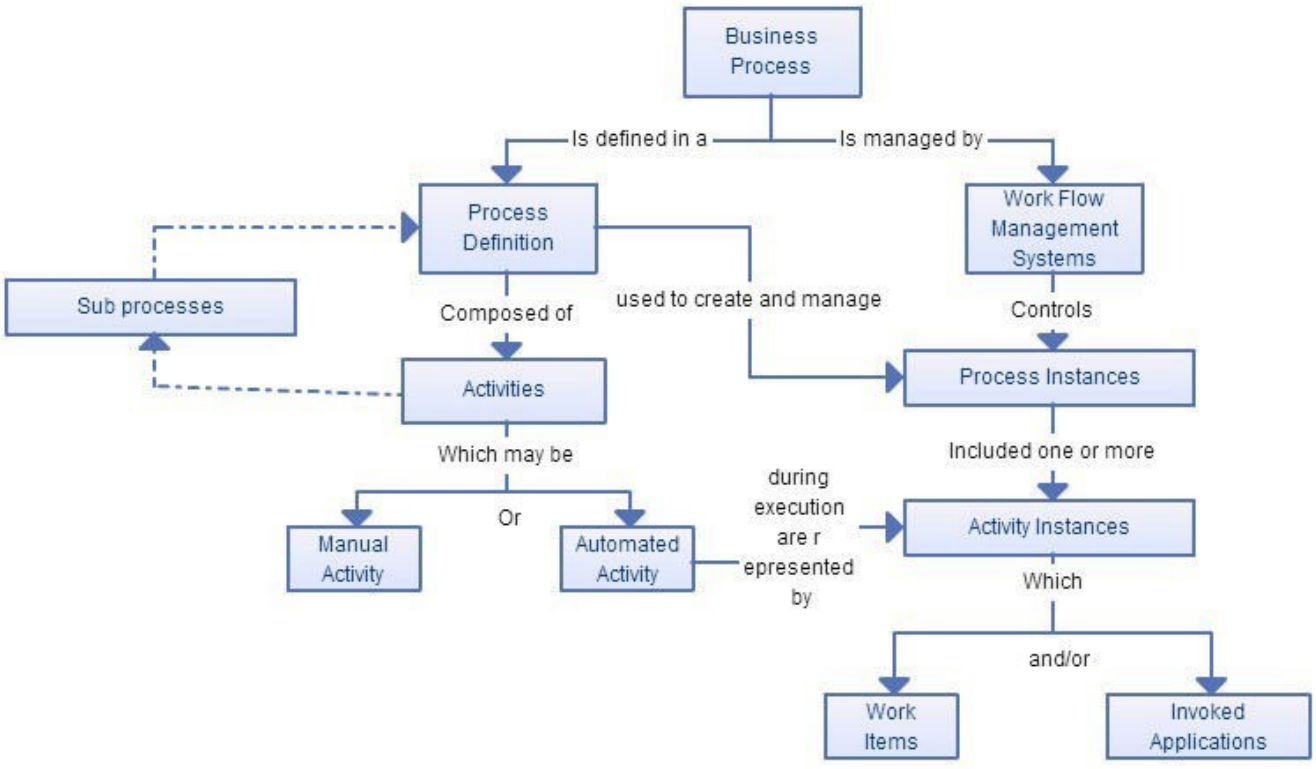
- Important that you designate which ERP product functionality is in scope.
- You need to briefly explain how the product feature supports the business activity.
- A scope definition provides less value if the project team and project stakeholders do not understand how ERP will support the business.

2.3 Primary Focus

Our primary focus is PHP, Android and iPhone Applications:-

- Website Theme Design & Customization
- Development of Responsive Website.
- Android Application i.e (Compatible From version 4.0 to 8.0 to all Android Models)
- iOS App (Compatible From 8.0 to 11.0 to all iPhone)
- Complete source code of the project after the completion of the project.
- Development & Database Design
- Walk-through of the back-end for Admin Panel via Skype.

3. Sequence Diagrams



4. Project Done On CMS/ERP:

4.1 Fusion 1 Service Management

Fusion service management is a dispatch CRM portal where companies can buy the subscription and can manager their any kind of service.

Screenshot:

4.2 Launch Whizz

Launch Whizz is THE first ever launch management software based on behavioral psychology & peak performance principles. It breaks down the humongous task of idea-to-launch into simple actionable tasks, gives instructions on how to smash those tasks, assigns deadlines to keep your back in the seat, kick the same if you miss a deadline AND rewards you when you meet one.
